

Fantasy – A perfect social multi vendor eCommerce script.

Version – 3.1.1

Fantasy - Easy Installation Steps

Script: Fantasy 3.1.1

1. Introduction

Following this document would demonstrate the steps involved in easy installation.

2. Uploading Fantasy files

1. Download the fantasy script files from the customer portal
2. Upload the same in the web root directory of your server
3. You can extract the file in the server or you can upload the extracted files
4. Once the upload is done, you can use the following URL in the browser to start the easy installation steps.

<http://www.yourservername.com/app/webroot/install/>

Note: In case of any permission issues during the installation, please make sure you will have the following files has write permissions under these following folders. By default these should have those permission, you can still change if you find it is not writable.

1. app/Config/config.php - This file should have 777 permission

1. app/Config/core.php - This file should have 777 permission

1. app/Config/database.php - This file should have 777 permission

After finishing the installation you can disable the write permissions to 655 for security reasons.

3. Confirm the server requirements

Before Starting the Installation, please be sure that you are having the following things

1. Database Name
2. Database Username
3. Database Password
